Color Textbook Of Histology, 2e

Synopsis

The new edition of this well-received text provides students with concise, current coverage of cell and molecular biology and classic morphology. It features a wealth of superb illustrations, including full-color light photomicrographs, electron micrographs, schematic diagrams, and drawings. Helpful tables summarize vital information for at-a-glance understanding, and summary statements highlight key material in each chapter.

Book Information

Paperback: 592 pages

Publisher: Saunders; 2 edition (March 9, 2001)

Language: English

ISBN-10: 0721688063

ISBN-13: 978-0721688060

Product Dimensions: 1 x 7.8 x 9.8 inches

Shipping Weight: 3 pounds

Average Customer Review: 3.7 out of 5 stars 25 customer reviews

Best Sellers Rank: #383,119 in Books (See Top 100 in Books) #33 in Books > Textbooks > Medicine & Health Sciences > Medicine > Basic Sciences > Histology #53 in Books > Medical Books > Basic Sciences > Histology #746 in Books > Medical Books > Basic Sciences > Anatomy

Customer Reviews

Leslie P. Gartner, PhD, Associate Professor of Anatomy, Department of Oral and Craniofacial Biological Sciences, Baltimore College of Dental Surgery, Dental School, University of Maryland, Baltimore, MD; James L. Hiatt, PhD, Associate Professor of Anatomy Emeritus, Department of Oral and Craniofacial Biological Sciences, Baltimore College of Dental Surgery, Dental School, University of Maryland, Baltimore, MD

Great textbook! I find it offers sufficiently comprehensive explanations, and even what I would consider review of material that should already be known before reading this textbook. The textbook has great pictures, but I wish they were printed in slightly higher resolution, or bigger pictures.

Even though this was a used book, it is almost like new! I am quite impressed with its condition, and extremely happy with the price I paid!

Was searching high and low on a textbook on Microscopic Anatomy. All have been a disappointment, but this one. It has colored pictures, that are clearly labeled, and a breakdown on the different tissues of the body in an organized and easy to read manner. The only thing lacking is that it is weak with mentioning the epithelium in the different types of tissues. But overall it is a perfect companion to my lecture. Be warned it is not an Histology atlas, is more of a read with some pictures, a textbook. Very pleased with purchase.

Definitely a great book. Solid information. I bought this book for my histology classes in medical school. The only thing is that many of the pictures and descriptions are of animal (mice, monkeys, etc) histology, not human.

LOTS OF detail. I like that sort of stuff. I am here to learn not to just know basic stuffs. I got this for graduate school.

This is probably one of my favorite biology text books. The photographs are well done and well placed (there is a lot of them, which is important to a histology course) and the text can be understood with minimum anatomy background.

Amazing

great histology book! a must have!
