Site Engineering For Landscape Architects

Synopsis

The Leading Guide To Site Design And Engineering; Revised And Updated Site Engineering for Landscape Architects is the top choice for site engineering, planning, and construction courses as well as for practitioners in the field, with easy-to-understand coverage of the principles and techniques of basic site engineering for grading, drainage, earthwork, and road alignment. The Sixth Edition has been revised to address the latest developments in landscape architecture while retaining an accessible approach to complex concepts. The book offers an introduction to landform and the language of its design, and explores the site engineering concepts essential to practicing landscape architecture today; from interpreting landform and contour lines, to designing horizontal and vertical road alignments, to construction sequencing, to designing and sizing storm water management systems. Integrating design with construction and implementation processes, the authors enable readers to gain a progressive understanding of the material. This edition contains completely revised information on storm water management and green infrastructure, as well as many new and updated case studies. It also includes updated coverage of storm water management systems design, runoff calculations, and natural resource conservation. Graphics throughout the book have been revised to bring a consistent, clean approach to the illustrations. Perfect for use as a study guide for the most difficult section of the Landscape Architect Registration Exam (LARE) or as a handy professional reference, Site Engineering for Landscape Architects, Sixth Edition gives readers a strong foundation in site development that is environmentally sensitive and intellectually stimulating.

Book Information

Hardcover: 368 pages

Publisher: Wiley; 6 edition (February 11, 2013)

Language: English

ISBN-10: 1118090861

ISBN-13: 978-1118090862

Product Dimensions: 8.3 x 1.2 x 9.2 inches

Shipping Weight: 2.3 pounds (View shipping rates and policies)

Average Customer Review: 4.2 out of 5 stars 8 customer reviews

Customer Reviews

The late STEVEN STROM, FASLA, was Associate Professor in the Department of Landscape Architecture at Rutgers, The State University of New Jersey. KURT NATHAN, MS, PE, is Professor Emeritus at Rutgers, The State University of New Jersey, and was formerly a consulting engineer for Conservation Engineering. JAKE WOLAND, ASLA, is a landscape architect with HEWITT in Seattle, Washington. He previously taught at Rutgers, The State University of New Jersey.

Great Book !

A fabulous book. I am a landscape architecture graduate student and use this for my landform class. Fortunately the assignments follow the math in the book. It is a very interesting read, 95% of the math is easily understood. Great descriptions and visuals. The book has smaller dimensions than the typical textbook which makes this even more convenient to carry around!

I purchased this book to study material that will be covered on Section 4 of the LARE. Overall I found the information to be very helpful and thorough. It was presented in a clear and easy to understand manner.

Vfghjyh

useful for LA

Extremely useful

ordered a new one but this one has some obvious damage on it similar to the other negative review. book binding had glue stains, slight rips and creasing and the page edges had water damage

Undergrad landscape architecture student, purchased this book for my construction class. I ordered a new copy of this book, however what I received was definitely not new. The edges were slightly bent and all the pages that were printed in color (near the middle of the book) had visible crease marks and what appears to be water damage (minor water damage, not noticeable unless you really examine it). However, books are meant to be used and it gets the job done. Was a bit upset I didn't get what I asked for, but oh well.
