I like these laminated quick memory jogger sheets. paired with a good reference for the topic they are a great help. This is an almost perfect formula cheat sheet. It has the equations, a quick explanation and even some quick notes (warnings?) for usage/application. I truly love this sheet. pair this sheet with a good Statistics text for a great reference combo. A great study helper for a Intro stats course test. Go section by section through the sheet and read the section title and look away and write down the formula on a different sheet, explain to yourself why the formula is that way component by component and then return to the sheet to see if your answer matches the sheets. Make notes on what you didn't get correct and review that section of the sheet or your course text...sometimes google can find a different source that explains the concept in a manner that makes sense to you so don't forget to use google when studying. Many times a topic is introduced to us and we are confused by the topic and the presentation of it doesn't help our understanding. I find googling the topic and finding alternate sources for information allows me to have the topic presented

in a different manner that does make sense to MY brain and then returning to the original explanation it now all makes sense.

Was hoping for a quick reference chart-- this is not. Hard to read and nothing "quick" about it.

I got this for my wife because she was just beginning statistics. I tried to read it off the pictures, but didn't have much luck. When it arrived I was surprised with how advanced it was and how the information beginners could use was spread throughout. It probably works well for people that have a firm foundation, but I wouldn't recommend it for a beginner.

Nice laminated guide for easy reference. Serves the purpose of providing a handy quick "tip and technique" sheet. Reduces amount of time you would need to do Google searches and researching information in print material appendixes and glossaries.
